

Category:  Curated Research Papers (LLM-Orch VAPT)

Index Reference: #19

Direct Source: <https://www.usenix.org/conference/usenixsecurity25>

Repository Scope & Relevance:

This reference card catalogs a foundational research publication indexed in the CMatrix security platform's academic library. Due to publisher access controls, paywalls, or institutional hosting, the complete manuscript is available via the direct publication link above.

CMatrix leverages these academic resources to maintain a state-of-the-art multi-agent vulnerability assessment and penetration testing (VAPT) framework, integrating theories of game-theoretic defenses, automated privilege escalation, dynamic attack graph analysis, and autonomous cyber-reasoning systems.
